

OUR CONTRIBUTION FOR A GREEN FUTURE 6 FACTS

MADE
IN
GERMANY 

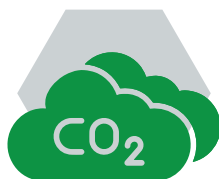

1. SOLAR PANELS

With photovoltaic panels on our roofs and on the south side of our main building, we achieve up to 900 kWp.

2. SELF-SUFFICIENCY

Our measures reduce our dependence on cost fluctuations in the electricity market.

3. CARBON NEUTRAL

Due to our efforts, we are almost carbon neutral in the Scopes 1 and already fully carbon neutral in Scope 2.

4. 100% GREEN ENERGY

Our production processes are free of CO2 emissions, as our machines are powered exclusively by green electricity.

5. DELIVERY

Our factory logistics are carbon neutral and we supply our customers in the greater East Westphalia region emission-free. Since the beginning of 2024, we have been one of the first companies in OWL to deliver its products using a 40-ton electric truck.

6. E-MOBILITY

Already one-third of our vehicle fleet consists of electric vehicles, which are also charged with green electricity on our premises.

OUR CONTRIBUTION FOR A GREEN FUTURE

NEW RECIPE

99% of our CO₂ emissions stem from processed materials (Scope 3). To significantly cut these emissions, we are converting our formulations for thermoformed products, such as cutlery and bath inserts, to contain 75% recyclate. This means that 75% of our products will be made from recycled plastics. With this initiative, we are setting a benchmark in our industry without sacrificing quality or functionality. This shift helps conserve natural resources, reduces CO₂ emissions per item by nearly two-thirds, and makes a substantial contribution to greenhouse gas reductions.

In the production of anti-slip mats, we utilize materials more efficiently, which reduces both weight and waste, while further lowering CO₂ emissions.

FUTURE TOPICS

- Conversion of all AGOFORM products for kitchen, bathroom and office to a recyclate content of 75%
- Conversion of all AGOFORM products to production with expanded material
- Scopes 1 + 2 = 0
